BOOK SYNOPSIS

This Second Edition is comprehensive and challenging textbook for undergraduate courses in audiology and hearing science, and for graduate students beginning an AuD program who may not have a previous background in the subject. It is designed to cover the content of both two-course sequences (Hearing Science and Principles of Audiology) as well as combined courses - providing a level of consistency in presentation. Chapters cover hearing science, diagnostic procedures, an introduction to hearing aids, and extensive coverage of anatomy and physiology of the auditory and vestibular systems. The author has taught an "Introduction to Audiology" course for more than 20 years, and has truly designed this text with the student in mind. **NEW TO THIS EDITION:** The second edition has been updated and reorganized, and also includes two brand new chapters, one on clinical-pure tone masking and another on hearing screening. Additional details and figures have been added on vestibular anatomy and physiology, acoustic resonance, speech acoustics, middle ear wide-band power (MEWP) measures of the middle ear, and masking for speech testing. In addition, James Jerger has revised his contributed chapter on the historical pathways in audiology, including the addition of an educational audiology path, thanks to the contribution of Cheryl DeConde Johnson. Gus Mueller and Earl Johnson have also revised their chapter on hearing aids to reflect the many updates that have taken place with amplification options over the past five years.
